COME INSIDE AND EXPERIENCE THE **aquacore**® ULTRA-FILTRATION ADVANTAGE

Imagine opening a faucet in your kitchen, or turning on the shower in your upstairs bathroom and out flows water that is more pure than what you might find in a bottle at the grocery store.

It's not a dream. It's a reality your family can experience with

aquacore® ultra-filtration

THE NEWEST REVOLUTION IN WHOLE HOME WATER TREATMENT

The **aquacore** ultra-filter is an advanced Ultrafiltration system that uses the latest hollow fiber technology to make all of the water in your home safer to drink.

The **aquacore** ultra-filter's patented multi-bore fibers are strong and efficient and the inside-out filtration process assures many years of safe, reliable water.

The **aquacore** ultra-filter system reduces more microbiological contaminants, more efficiently, than most whole-home water filtration systems on the market today.

Look what **aquacore**® ultra-filtration can do for your family...

Safety

aquacore® ultra-filter arrests impurities as small as .015 microns* in size (less than one millionth of an inch), such as...

Bacteria ³	99.9999%
Giardia ⁴	99.99%
Cryptosporidium ⁴	99.99%
Viruses ⁴	99.95%

* As tested by manufacturer

Convenience

With **aquacore**® ultra-filtration, you can get your drinking water from any source in your home.

- No more shopping for bottled water
- No more replacing faucet and pitcher filters¹

Aquacore's Meter/Controller assures fully automatic operation with no maintenance² for up to 5 years.

aquacore® ultra-filter works on a wide range of water pressure.

Peace of Mind

aquacore® is **friendly to the environment** because it does not add any chemicals to Ultrafilter your water and will not create any nasty by-products.

Unlike Reverse Osmosis systems that often waste more than 3 times as much water as they produce for consumption. **aquacore**® is **friendly to the environment** as it uses a minimal amount of water to remain clean and fresh.

aquacore® is **friendly to your plumbing system** as it will not produce water that can corrode your pipes.

aquacore® is **friendly to water softeners** and other water using appliances, helping them operate more efficiently and extending their useful life.

1 In systems where VOC, chlorine, taste, and odor removal is important, use a carbon post-filter.

2 **aquacore**® ultra-filter requires no scheduled maintenance, but any pre-filters and post-filters installed as part of the system require scheduled replacement based upon source water quality.

3 Tested by Analytical Services Incorporated.

4 Membrane modules tested by The Water Treatment Committee Of The California DHS Drinking Water Program.
